MAIN is a Principal Investor in Private Debt and Equity

- NAV growth of $9.50 per share (or 74%) since 2007
- Cumulative net realized gains from LMM portfolio investments of $118.1 million since MAIN's initial public offering

MAIN ST
CAPITAL CORPORATION

MAIN Strategy Produces Differentiated Returns

Enhanced Value Proposition - Three Ways to Win are Better Than One

1. Sustain and Grow Dividends
   - Efficient operating structure provides operating leverage to grow distributable net investment income, and dividends paid, as investment portfolio and total investment income grow
   - 86% increase in monthly dividends from $0.33 per share paid in Q4 2007 to declared dividends of $0.615 per share for Q2 2021
   - Never decreased regular monthly dividends (including through 2008/2009 recession)
   - Paid or declared $30.830 per share in total dividends since October 2007 IPO at $15.00 per share ($26.790 per share in regular dividends and $4.040 per share in supplemental dividends)
   - Multi-faceted investment strategy supports growth of dividends over various cycles and markets

2. Meaningfully Grow Net Asset Value ("NAV") Per Share
   - $12.85 at December 31, 2007 to $22.35 at December 31, 2020 – 74% growth; CAGR of 4.3%
   - Represents incremental economic return to investors beyond dividends
   - MAIN's debt-focused peers (which comprises most BDCs) cannot generate NAV per share growth through the cycles
   - Unrealized appreciation is a good proxy for future dividend growth without the need for additional capital through growing portfolio dividend income and harvested realized gains from equity investments
   - Ability to grow NAV per share provides opportunity for MAIN stock share price appreciation and additional shareholder returns

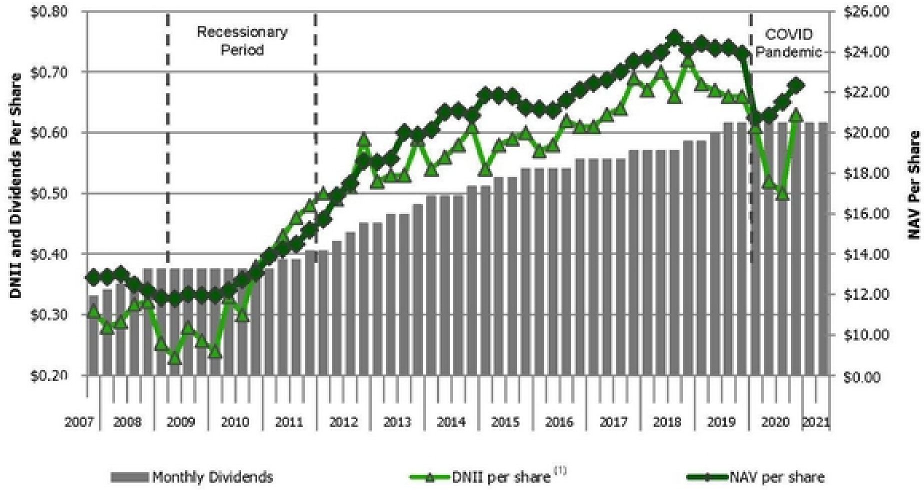
3. Supplement Growth in Distributable Net Investment Income with Periodic Realized Gains
   - LMM equity component of investment strategy provides opportunity for meaningful realized gains (analogous to PIK income on debt investments from cash flow perspective, but more tax efficient and without cap on upside)
   - Realized gains validate the quality of MAIN's unrealized appreciation
   - Realized gains can be paid to shareholders as dividends or retained for future reinvestment due to MAIN's unique tax structure

MAIN ST CAPITAL CORPORATION

Historical Monthly Dividends, Net Asset Value ("NAV") and Distributable Net Investment Income ("DNII")(1) Per Share

MAIN's unique focus on equity investments in the Lower Middle Market provides the opportunity for significant NAV per share growth

MAIN's efficient operating structure provides significant operating leverage, greater dividends and greater overall returns for our shareholders



- In addition to the monthly dividends above, $4.04 per share of supplemental dividends have been paid
- Annual return on equity averaging approximately 13.0% from 2010 through the fourth quarter of 2020

(1) See reconciliation of DNII per share to Net Investment Income per share and Non-GAAP Information disclosures included on pages 37 and 47 of this presentation

(2) Source: National Center for The Middle Market; includes number of U.S. domestic businesses with revenues between $10 million and $1 billion

(3) Weighted-average effective yield includes amortization of deferred debt origination fees and accretion of original issue discount, but excludes fees payable upon repayment of the debt instruments and any debt investments on non-accrual status

(4) Weighted-average effective yield is calculated using the applicable floating interest rate as of December 31, 2020

Stable, Long-Term Leverage – Significant Unused Capacity

MAIN maintains a conservative capital structure, with limited overall leverage and low cost, long-term debt

Capital structure is designed to correlate to and complement the expected duration and fixed/floating rate nature of investment portfolio assets

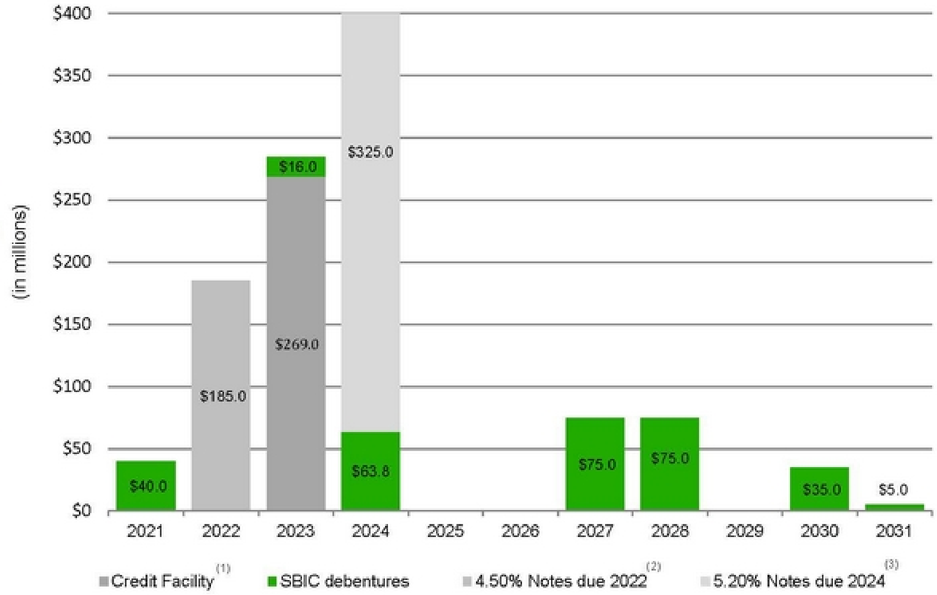
Facility[1]	Interest Rate	Maturity	Principal Drawn
$780.0 million Credit Facility [2]	L+1.875% floating (2.0%[3])	September 2023 (fully revolving until maturity)	$269.0 million
Notes Payable	4.5% fixed	Redeemable at MAIN's option at any time, subject to certain make whole provisions; Matures December 1, 2022	$185.0 million
Notes Payable	5.2% fixed	Redeemable at MAIN's option at any time, subject to certain make whole provisions; Matures May 1, 2024	$450.0 million
SBIC Debentures [4]	3.4% fixed (weighted average)	Various dates between 2021 - 2031 (weighted average duration = 5.4 years)	$309.8 million

(1) Does not include the $300.0 million of 3.00% Notes due July 2026, which were issued in January 2021, the proceeds from which were used to repay borrowings under the credit facility on a short-term basis
(2) As of December 31, 2020, MAIN's credit facility had $780.0 million in total commitments with an accordion feature to increase up to $800.0 million; Borrowings under this facility are available to provide additional liquidity for investment and operational activities
(3) Revolver rate reflects the rate based on LIBOR as of December 31, 2020 and effective as of the contractual reset date as of January 1, 2021
(4) MAIN's SBIC licenses provided for total SBIC debenture capacity of $350.0 million, resulting in undrawn capacity at December 31, 2020 of $40.2 million

Long-term Maturity of Debt Obligations

MAIN's conservative capital structure provides long-term access to attractively-priced and structured debt facilities

- Allows for investments in assets with long-term holding periods / illiquid positions and greater yields and overall returns
- Provides downside protection and liquidity through economic cycles
- Allows MAIN to be opportunistic during periods of economic uncertainty



(1) As of December 31, 2020, MAIN's credit facility had $780.0 million in total commitments with an accordion feature to increase up to $800.0 million; Borrowings under this facility are available to provide additional liquidity for investment and operational activities

(2) Issued in November 2017; redeemable at MAIN's option at any time, subject to certain make-whole provisions

(3) Originally issued in April 2019 with follow-on issuances in December 2019 and July 2020; redeemable at MAIN's option at any time, subject to certain make-whole provisions

Interest Rate Impact and Sensitivity

While MAIN's financial results are subject to significant impact from changes in interest rates, upside is greater than downside due to majority fixed rate debt obligations and majority floating rate debt investments with minimum interest rate floors

- 78% of MAIN's outstanding debt obligations have fixed interest rates[4], limiting the increase in interest expense
- 71% of MAIN's debt investments bear interest at floating rates[4], the majority of which contain contractual minimum index rates, or "interest rate floors" (weighted-average floor of approximately 110 basis points)[5]
- Provides MAIN the opportunity to achieve significant increases in net investment income if interest rates increase, with limited remaining negative impact if interest rates decrease

The following table illustrates the approximate annual changes in the components of MAIN's net investment income due to hypothetical increases (decreases) in interest rates[1][2] (dollars in thousands):

Basis Point Increase (Decrease) in Interest Rate	Increase (Decrease) in Interest Income	(Increase) Decrease in Interest Expense[3]	Increase (Decrease) in Net Investment Income	Increase (Decrease) in Net Investment Income per Share[6]
(100)	(388)	416	28	0.00
(50)	(371)	416	45	0.00

125	6,845	(3,363)	3,482	0.05
150	10,024	(4,035)	5,989	0.09

(1) Assumes no changes in the portfolio investments, outstanding revolving credit facility borrowings or other debt obligations existing as of December 31, 2020

(2) Assumes that all LIBOR and prime rates would change effective immediately on the first day of the period; However, the actual contractual LIBOR rate reset dates would vary in future periods generally on either a monthly or quarterly basis across both the investments and our revolving credit facility

(3) The hypothetical (increase) decrease in interest expense would be impacted by the changes in the amount of debt outstanding under our revolving credit facility, with interest expense (increasing) decreasing as the debt outstanding under our revolving credit facility increases (decreases)

(4) As of December 31, 2020

(5) Weighted-average interest rate floor calculated based on debt principal balances as of December 31, 2020

(6) Per share amount is calculated using shares outstanding as of December 31, 2020

Non-GAAP Information

Distributable net investment income is net investment income, as determined in accordance with U.S. generally accepted accounting principles, or U.S. GAAP, excluding the impact of share-based compensation expense which is non-cash in nature. MAIN believes presenting distributable net investment income and the related per share amount is useful and appropriate supplemental disclosure of information for analyzing its financial performance since share-based compensation does not require settlement in cash. However, distributable net investment income is a non-U.S. GAAP measure and should not be considered as a replacement for net investment income and other earnings measures presented in accordance with U.S. GAAP. Instead, distributable net investment income should be reviewed only in connection with such U.S. GAAP measures in analyzing MAIN's financial performance.

Net Debt to NAV Ratio is calculated as the Debt to NAV Ratio as determined in accordance with U.S. GAAP, except that total debt is reduced by cash and cash equivalents. The **Non-SBIC Debt to NAV Ratio** is calculated in the same manner as the Debt to NAV Ratio, except that outstanding SBIC debentures are excluded from the debt pursuant to an exemptive order Main Street received from the Securities and Exchange Commission. Main Street believes presenting the Net Debt to NAV Ratio is useful and appropriate supplemental disclosure for analyzing its financial position and leverage. Main Street believes presenting the Non-SBIC Debt to NAV Ratio is useful and appropriate supplemental disclosure because Main Street, a business development company, is permitted to exclude such borrowings from its regulatory asset coverage ratio calculation pursuant to an exemptive order received from the Securities and Exchange Commission. However, the Net Debt to NAV Ratio and the Non-SBIC Debt to NAV Ratio are non-U.S. GAAP measures and should not be considered as replacements for the Debt to NAV Ratio and other financial measures presented in accordance with U.S. GAAP. Instead, the Net Debt to NAV Ratio and the Non-SBIC Debt to NAV Ratio should be reviewed only in connection with such U.S. GAAP measures in analyzing Main Street's financial position.

Conservative Leverage - Regulatory

Passage of the Small Business Credit Availability Act in December 2017 provides the opportunity for BDCs to obtain board or shareholder approval to access additional leverage by lowering the required asset coverage to 1.50x (from 2.00x)

MAIN has historically operated at conservative regulatory leverage levels, in all cases with significant cushion to the historical (2.00x) regulatory limits, and proven through historical performance that MAIN does not require access to additional leverage to generate market leading returns

Interest Rate Impact and Sensitivity

While MAIN's financial results are subject to significant impact from changes in interest rates, upside is greater than downside due to majority fixed rate debt obligations and majority floating rate debt investments with minimum interest rate floors

- 78% of MAIN's outstanding debt obligations have fixed interest rates[4], limiting the increase in interest expense
- 71% of MAIN's debt investments bear interest at floating rates[4], the majority of which contain contractual minimum index rates, or "interest rate floors" (weighted-average floor of approximately 110 basis points)[5]
- Provides MAIN the opportunity to achieve significant increases in net investment income if interest rates increase, with limited remaining negative impact if interest rates decrease

The following table illustrates the approximate annual changes in the components of MAIN's net investment income due to hypothetical increases (decreases) in interest rates[1][2] (dollars in thousands):

Basis Point Increase (Decrease) in Interest Rate	Increase (Decrease) in Interest Income	(Increase) Decrease in Interest Expense[3]	Increase (Decrease) in Net Investment Income	Increase (Decrease) in Net Investment Income per Share[6]

(1) Assumes no changes in the portfolio investments, outstanding revolving credit facility borrowings or other debt obligations existing as of December 31, 2020

(2) Assumes that all LIBOR and prime rates would change effective immediately on the first day of the period; However, the actual contractual LIBOR rate reset dates would vary in future periods generally on either a monthly or quarterly basis across both the investments and our revolving credit facility

(3) The hypothetical (increase) decrease in interest expense would be impacted by the changes in the amount of debt outstanding under our revolving credit facility, with interest expense (increasing) decreasing as the debt outstanding under our revolving credit facility increases (decreases)

(4) As of December 31, 2020

(5) Weighted-average interest rate floor calculated based on debt principal balances as of December 31, 2020

Larger companies than the LMM investment strategy
- Current Middle Market portfolio companies have weighted-average EBITDA of approximately $76.5 million[(1)]

Non-GAAP Information

Distributable net investment income is net investment income, as determined in accordance with U.S. generally accepted accounting principles, or U.S. GAAP, excluding the impact of share-based compensation expense which is non-cash in nature. MAIN believes presenting distributable net investment income and the related per share amount is useful and appropriate supplemental disclosure of information for analyzing its financial performance since share-based compensation does not require settlement in cash. However, distributable net investment income is a non-U.S. GAAP measure and should not be considered as a replacement for net investment income and other earnings measures presented in accordance with U.S. GAAP. Instead, distributable net investment income should be reviewed only in connection with such U.S. GAAP measures in analyzing MAIN's financial performance.

Net Debt to NAV Ratio is calculated as the Debt to NAV Ratio as determined in accordance with U.S. GAAP, except that total debt is reduced by cash and cash equivalents. Main Street believes presenting the Net Debt to NAV Ratio is useful and appropriate supplemental disclosure for analyzing its financial position and leverage. However, the Net Debt to NAV Ratio is a non-U.S. GAAP measure and should not be considered as a replacement for the Debt to NAV Ratio and other financial measures presented in accordance with U.S. GAAP. Instead, the Net Debt to NAV Ratio should be reviewed only in connection with such U.S. GAAP measures in analyzing Main Street's financial position.
